

Children's Vision

Webinar & education session for GPs & primary healthcare professionals

Good vision is critical for a child's learning, social, behavioural and physical development, and eye disorders are one of the most common long-term health problems experienced by Australian children.

Part of a series of eye health webinars from Vision 2020 Australia, this education session will give GPs and primary healthcare professionals evidence-based information about common eye conditions experienced by children, treatment and referral pathways.

PRESENTER PROFILE | ZEINAB FAKIH

Zeinab is currently the lead Optometrist of paediatric services at the Australian College of Optometry (ACO).

She has a keen interest in teaching and has worked as both a senior clinical teaching instructor at the University of Melbourne and in teaching clinics at the ACO. Zeinab is passionate about the provision of eye care to disadvantaged populations and.

Zeinab has special interest in myopia and is currently researching the effect of social factors on the management of myopia.
